Introduction

The *Animal Classification Flash Cards: Vertebrates* can be used to help children classify animals by type through the use of flash cards, animal class description cards, activities, and games. It focuses on vertebrates exclusively and covers five types: mammals, birds, amphibians, reptiles, and fish.

The following items are included in this product:

- Activities for Flash Cards
- Animal Class Description Cards
- List of Animals by Class
- Instructions for Preparation of Flash Cards
- 50 flash cards (ten for each class)

If the children who will be using the flash cards are not familiar with the vertebrate types, you may want to show them the Animal Class Description Cards first and put a few of the flash cards under each card for example purposes.

Animal Class Description Cards

Instructions: Print on paper or card stock. Cut out cards on solid black lines. Laminate if desired.

Mammals

Mammals are warm-blooded animals that have fur or hair. They breathe air with lungs and have four limbs. They are born alive and produce milk for their young.

Birds

Birds are warm-blooded animals that breathe air. They have feathers, wings, and a beak. They lay eggs instead of giving birth.

Amphibians

Amphibians are cold-blooded animals that have moist skin and webbed feet. They live on both land and in the water. They lay their eggs in the water.

Reptiles

Reptiles are cold-blooded animals that have dry, scaly skin. They breathe air. Most reptiles lay eggs.

Fish

Fish are cold-blooded animals that live in the water. Most have scales and fins. Fish breathe underwater with gills and lay eggs in the water.
